*Registration Criteria that presently apply, other criteria may apply after further assessment.*

**(2) Landscape and aesthetic value**

The object of this value is to identify trees that are of particular importance to the community due to their substantial contribution to the surrounding landscape.

A tree may be considered to be of landscape and aesthetic value if it is situated in a prominent location when viewed from a public place and it:

- (a) contributes significantly to the surrounding landscape based on its overall form, structure, vigour and aesthetic values; or
- (b) represents an outstanding example of the species, including age, size or habit; or
- (c) is an exceptional example of a locally native species that reached maturity prior to urban development in its immediate vicinity.

**Statement Against the Criteria**

This is one of five *Eucalyptus melliodora* trees growing within the estate development of Crace Stage 2. The trees have been nominated for inclusion to the ACT Tree Register due to their exceptional health, stature and maturity. The trees are exceptional examples of the species which contribute significantly to the surrounding landscape. They have all reached maturity prior to urban development and will provide an important aesthetic component within the landscape when the estate is completed. The retention of these remnant trees will also provide connectivity between the new suburb and the adjacent woodland nature reserve.
