Plant Species for Urban Landscape Projects in Canberra

Botanical Name: *Eucalyptus cinerea* (Eci)

Common Name: Argyle apple

Species description

- Evergreen
- Spreading crown sometimes with low branches
- Fibrous, red, stringy bark
- Attractive, often round, silver-blue foliage
- White flowers in October and November
- Small woody fruit

Height and width

10 to 15 metres tall by 15 metres wide

Species origin

Central and southern tablelands of New South Wales and a small area of north east Victoria

Landscape use

- Available Soil Volume required 68m³
- Suitable for use in urban parks and revegetation areas
- Can only be used as a street tree as a replacement in existing plantings
- Requires a minimum clearance of 9m from buildings

Use considerations

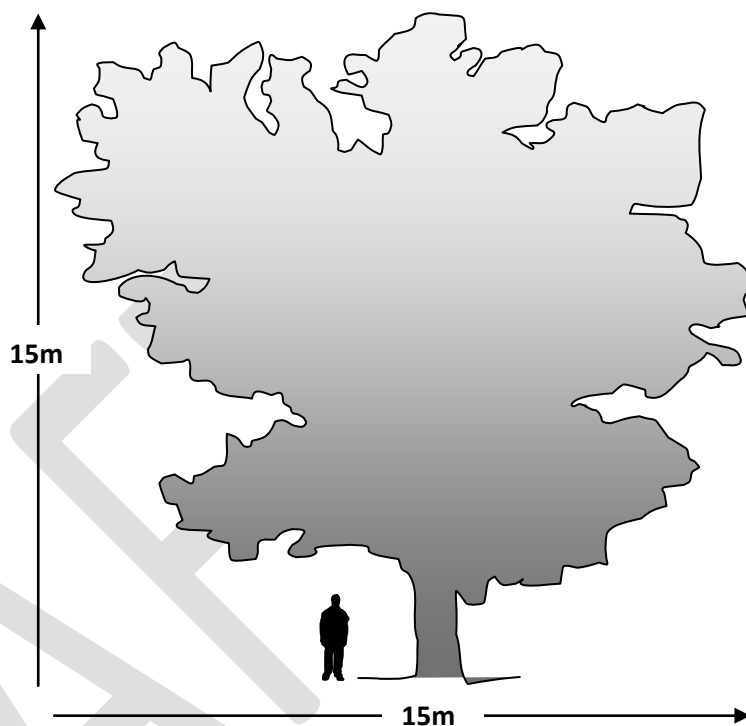

- Performs well in ACT and has been planted for many years
- High frost tolerance to minus 10 degrees Celsius
- Prefers good soils with good drainage, but will grow in shallow rocky soils and tolerate poorly drained soils and wet areas
- [Medium longevity](#)
- Moderate growth rate
- Moderate to high flammability
- Subject to sawfly larvae
- Important to formative prune in early years to avoid branching to the ground
- Flowers are attractive to bees for honey

Examples in Canberra

Endeavour Street, Red Hill
