**Registration Criteria that presently apply, other criteria may apply after further assessment.**

**(2) Landscape and aesthetic value**

The object of this value is to identify trees that are of particular importance to the community due to their substantial contribution to the surrounding landscape.

A tree may be considered to be of landscape and aesthetic value if it is situated in a prominent location when viewed from a public place and it:

- (a) contributes significantly to the surrounding landscape based on its overall form, structure, vigour and aesthetic values; or
- (b) represents an outstanding example of the species, including age, size or habit; or
- (c) is an exceptional example of a locally native species that reached maturity prior to urban development in its immediate vicinity.

## **Statement against the Criteria**

This *Eucalyptus melliodora* is an outstanding example of a locally native species which reached maturity prior to urban development in its immediate vicinity. The tree has a single trunk, is 20.0m high, and has a canopy spread of 26.0m. The tree was retained as part of the suburb when Bonner was developed and now sits within a local urban park. The tree is of particular note due to its prominence within the landscape and because of its excellent health and vigour. Bonner will benefit greatly from the retention of this tree as it provides amenity, aesthetic and some habitat values.
