(2) Landscape and aesthetic value

The object of this value is to identify trees that are of particular importance to the community due to their substantial contribution to the surrounding landscape.

A tree may be considered to be of landscape and aesthetic value if it is situated in a prominent location when viewed from a public place and it:

- (a) contributes significantly to the surrounding landscape based on its overall form, structure, vigour and aesthetic values; or
- (b) represents an outstanding example of the species, including age, size or habit; or
- (c) is an exceptional example of a locally native species that reached maturity prior to urban development in its immediate vicinity.

Statement Against the Criteria

This remnant *Eucalyptus blakelyi* plays an important role in the landscape due to its age, stature and prominent position within the small park it is located. The tree provides habitat for nest building birds and also contains a number of parrot hollows. Bruce is blessed with having several parks containing remnant vegetation and this small park is particularly attractive due to this magnificent tree. The tree meets criteria for inclusion to the Act Tree Register based on the exceptional aesthetic and landscape attribution it provides. Noted features of this tree are its very large spreading canopy and interesting multi branched trunk habit.
